

tourdersinne

Mobile Science Edutainment

One of the most crucial experiences in one's life is to recognize that we can be deceived.

Come and join us in experiencing, marvelling and grasping knowledge! The **tourdersinne (tourofthesenses)** exhibition offers a variety of interactive experiments focused on human perception suitable for a wide audience.

Stunning illusions:

In everyday life, our brains are constantly processing information to try to make sense of the world around us. The **tourdersinne** introduces some amazing phenomena resulting from the various mechanisms that the brain employs in doing so. You will experience that your perception depends on various circumstances such as your personal experiences, your subconscious expectations and your individual knowledge. See yourself grow from a midget to a giant, lose your balance, realise that reading is faster than thinking and take a look into your own eye! This user-friendly and easily accessible exhibition makes it possible for one and all to get in touch with the sciences behind perception, psychology and brain sciences in a playful and personal way.

Size and scope: We invite you to playfully explore the world of human perception through 32 astonishing and informative exhibits describing 44 different experiments. The overall exhibition area is 200-500 m². Roofing is needed.

Costs: on request.

Regardless of the space available or duration required, the exhibition can be easily adapted to meet your requirements. The exhibition layout is flexible and exhibits may be selected and combined flexibly.
